KANDAREE™

KANDAREE Textile ERP is a highly configurable product to fit in any core business of woven fabric manufacturing under Textile sector. It is built with an objective to increase efficiency in every corner, targeted for higher productivity and profitability. From costing to delivery, **KANDAREE** Textile ERP interweaves all sequential and parallel task toward a single goal of higher productivity with quality. This solution provides full visibility of real-time data, represented in a timely manner to make informed and critical timely decisions.

KANDAREE Textile will transform your organization into a new era of digital management and enable you to make decisions based on real-time data on the ground.

Sales and marketing

An intelligent system to assist you to manage sales, customer relationships with highly interactive communication. It offers full visibility to act smartly in pre-costing, price negotiation, procuring orders, issue sales orders, search for available stock, issuing PI and oversee final delivery. It lets you browse through the Style Library to plan sample production if required. Customer service is embedded in this module to record all returns, complaints and support calls.

Product planning

KANDAREE is capable of planning the production schedule. It is embedded with the highly intelligent algorithm to simplify the most complex production planning process. The system plans on visual interactive board considering the delivery date, supply chain commitments, current production, availability of right size beam, and pre & post processing jobs. **KANDAREE** is built with the intelligence to suggest the most optimized plan considering all given available resources. The planning board is extremely dynamic to accept any current situation and considers any changes in prescheduling activity and produces a revised plan.

Time & action

Complete task level monitoring and Critical Path Analysis are handled through this system. The system provides enough flexibility to the user to create Task Templates for different Product Types and Order Lead Times. Templates with predefined tasks and relationships are kept in the library.

The system provides Critical Path for an Order and also "task-to-do" list for each individual employee and keeps track of the completion status. Any deviation on the Critical Path can be immediately picked up for corrective measure. The system notifies critical tasks and alerts for missed tasks. Company based escalation rule can also be set into the system.

Product development

KANDAREE works as a great tool for product development department. It creates the Recipe Bank from each and every product developed. The complete recipe for each product type is maintained with each iteration in the development phase. Before any new product development, system can flash the closest matched product based on certain given parameters to help in creating a new product.

Fabrics development

KANDAREE works as a great tool for product development department. It creates the Recipe Bank from each and every product developed. The complete recipe for each product type is maintained with each iteration in the development phase. Before any new product development, system can flash the closest matched product based on certain given parameters to help in creating a new product.

Store control

KANDAREE manages yarn, fabric, dyes & chemicals stocks with its uniquely designed flexible master data structure. It tracks any item by its batch, manufacturer, location, quality, expiry date, and invoice. The system receives goods against the purchase order. It assists the store people in palletizing, picking, preparing delivery challan, truck loading and making the delivery to the clients. It has the flexibility to create multiple stores and move goods in sync with the production process. A quality check is embedded within the process from receiving goods to the ready-to-issue stage. Quarantine process is in place to handle the quality rejections or purchase returns. From yarn receive to finished good delivery, system can track and monitor all items by use of barcode.

The system processes all type of purchases initiated through Indent/Requisition of Stock, Capital and Service from respective departments. Through this module Purchase Orders to the suppliers are raised against the approved purchase requisition. The system validates requisitions with stock availability before raising the work order. The system also allows independent Purchase Order which is unique and without any tagging with the mainstream work order. System has the facility to email softcopy of the purchase order directly to the supplier. Service Work Orders to Vendors for various processes are also handled through this module. All modes of Payment (LC, Credit, Cash, TT, etc.) are supported along with downstream integration.

Procurement

Commercial activity

KANDAREE support all type of commercial activity related to import and export. It tracks and monitors import status from L/C opening to receipt of good at the store. The system generates all shipping documents. It also tracks shipping document from preparation to submission to bank. It records all banking transactions and internally updates the accounting system.

Finance & accounting

KANDAREE works as a great tool for product development department. It creates the Recipe Bank from each and every product developed. The complete recipe for each product type is maintained with each iteration in the development phase. Before any new product development, system can flash the closest matched product based on certain given parameters to help in creating a new product.

HR & payroll

The System is a fully integrated, modular, flexible and configurable solution, bringing a tailor-made software platform for all HR processes. It provides instant access to the manager and the employees for relevant information and HR activities. Appropriate access rights are defined in the administrative part of the application, in order to prevent any privacy breach or security conflicts.

From HR budgeting to separation, the system takes care of each and every HR related activity. Apart from the full HR function like Attendance, Shift, Leave, Transfer, Promotion, Training and Disciplinary activity, the system also processes the payroll. It is capable of generating individual pay slip to each employee and email it to the respective person.
